

TECE

SIMPLY THE RIGHT FIT

Clever solutions for sophisticated bathroom design

Sanitary systems

close to you

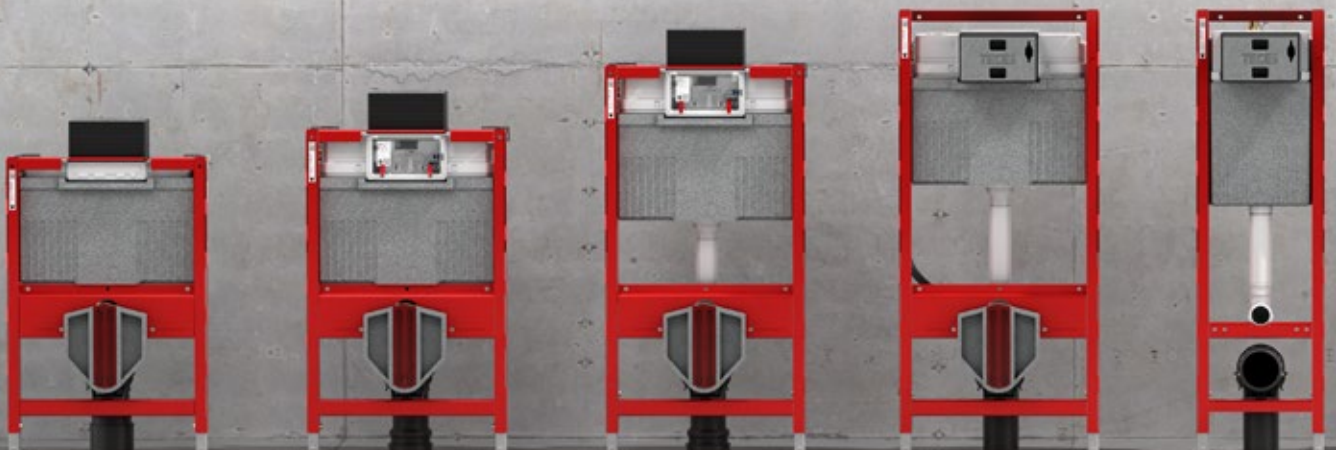

ALWAYS A SOLUTION AT HAND

Low window sills, sloping ceilings, narrow bathrooms, a tiny guest toilet, preparations for a shower toilet at a later date or simply the desire for an optimal room layout: with TECEprofil toilet modules, you are always perfectly advised.

The challenge of low window sills

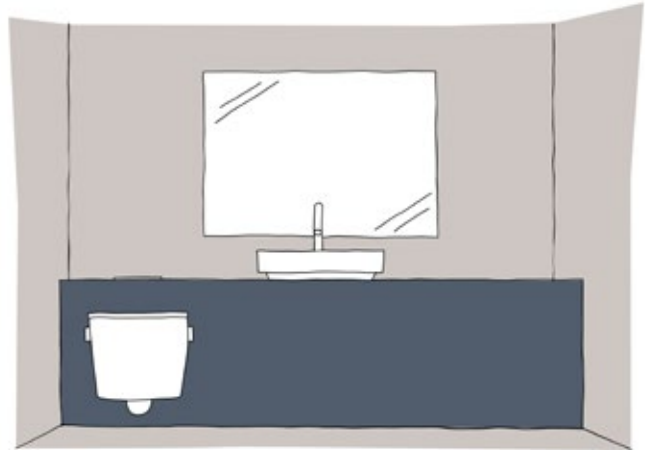

The TECEprofil range includes toilet modules in 750, 820, 980 and 1120 mm. Problems with low window sills are now a thing of the past.

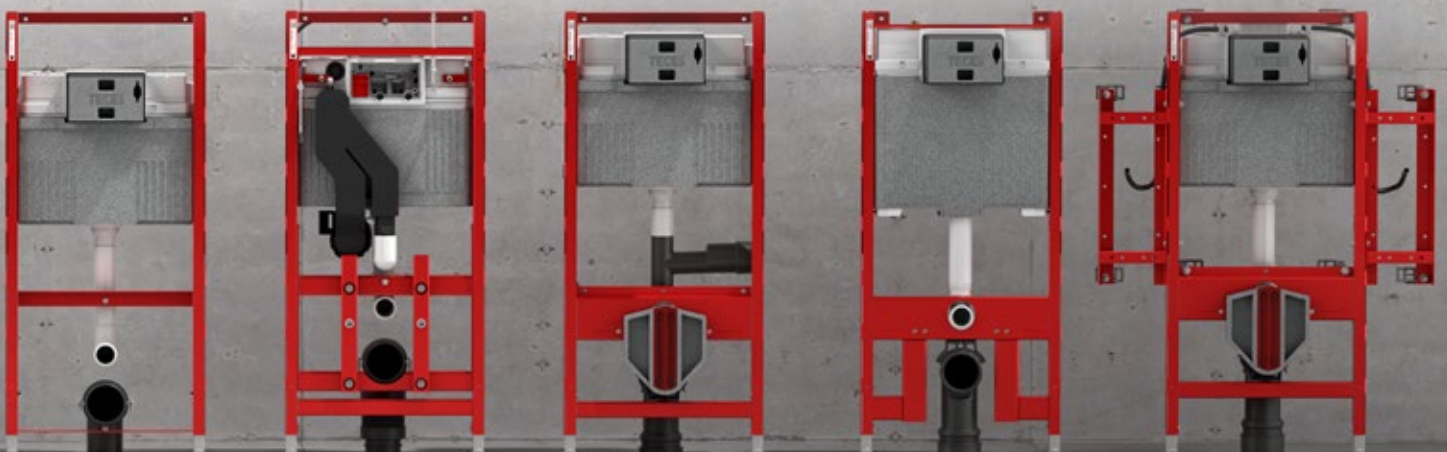

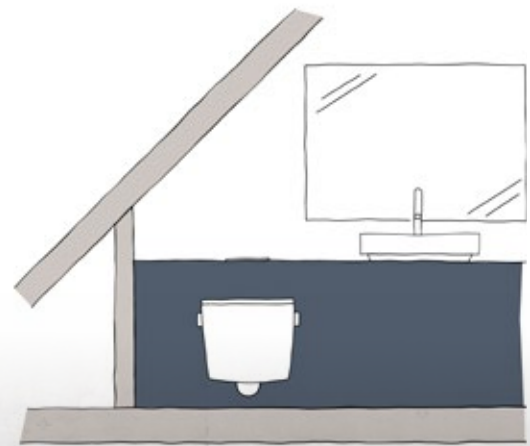

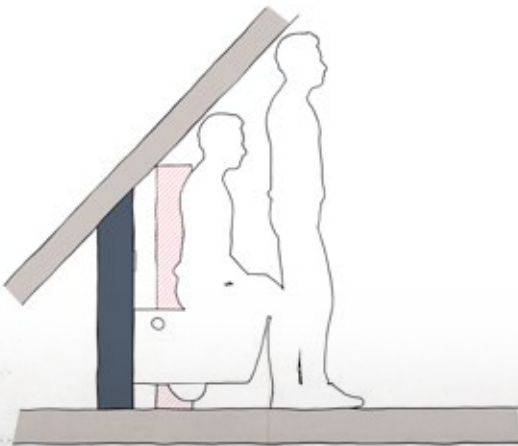

Washbasin and toilet at the same height?

In modern bathroom design, countertop washbasins have become a popular design element. With the TECEprofil toilet module with Uni-750 cistern, you can bring your toilet and washbasin to the same level and avoid unsightly height differences.

Also perfect for sloping ceilings

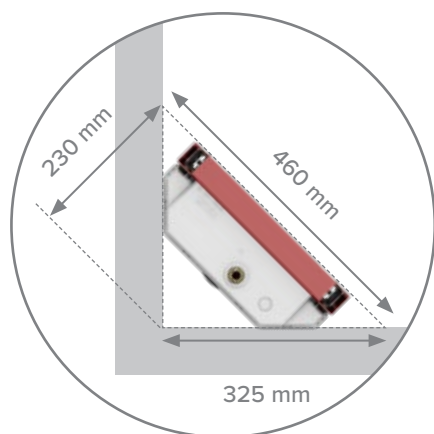

In attics, it is often a question of making optimum use of the available space in the bathroom. With a toilet module that fits the room perfectly, you can ensure optimal conditions. When planning and positioning the toilet, pay particular attention to the room height directly in front of the ceramic.

SOPHISTICATED FLUSHING TECHNOLOGY FOR EVERY INSTALLATION SITUATION

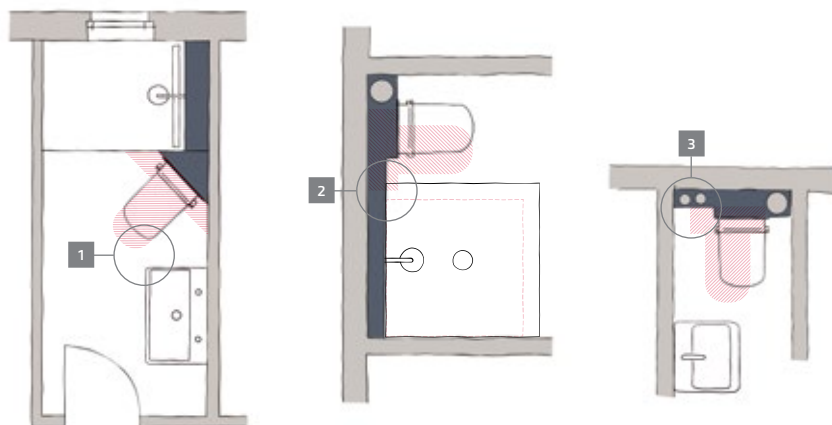

Everything just fits

Clever design inside and out makes the compact TECEprofil toilet module with Compact 320 cistern a flexible all-rounder for toilet installation.

Clever design, great performance

The Compact 320 cistern offers a convenient flush volume in a compact format. With a width of just 320 mm and slanted tank corners, it also fits into particularly narrow installation situations. Its 7-litre flush volume provides the necessary safety, even for direct flushing.

- 1 Less projection ensures a greater distance between toilet and washbasin.
- 2 Thanks to the 18 cm narrower shaft, a 90 cm shower tray can be fitted here instead of an 80 cm one.
- 3 With its narrow width, the toilet module can be placed between the downpipes and risers instead of in front of them.

Shaded for comparison:
Standard toilet modules
with 500mm width.

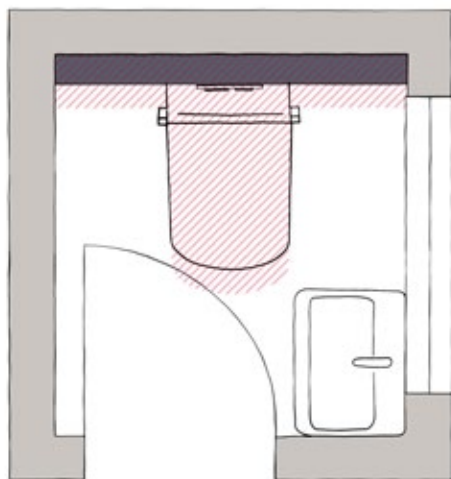

INNER VALUES THAT COUNT

Slim installation, high performance

Compared to the TECE Uni-cistern the TECE Octa II cistern is 7 cm slimmer, making it ideal for installation in partition walls. With a water volume of 7 litres, it offers sufficient reserves for immediate flushing at all times.

Nothing spared

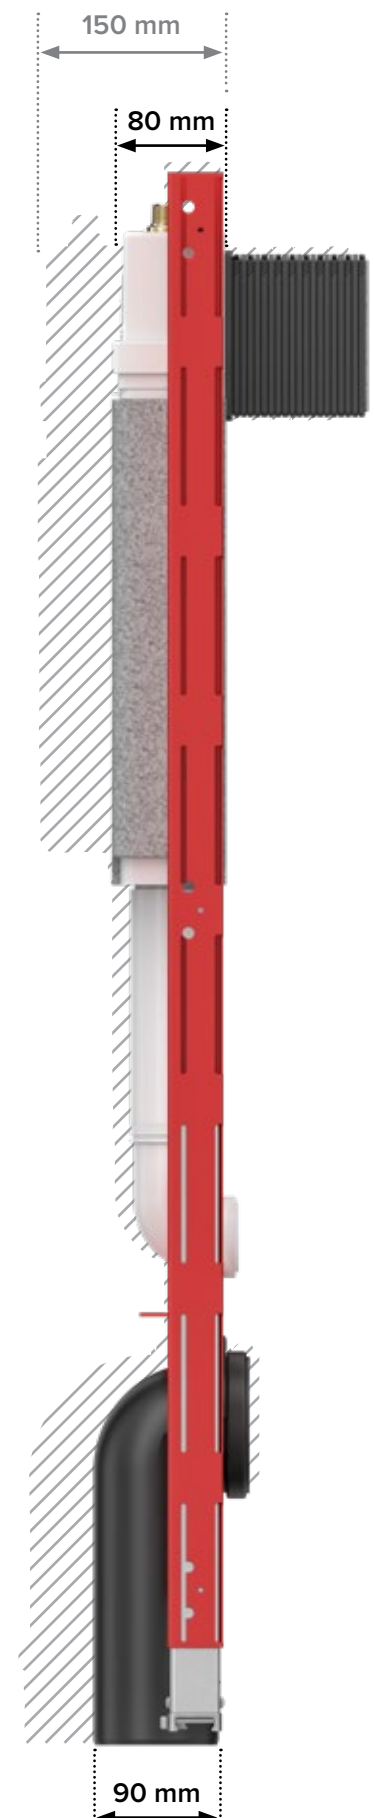

Big technology in a little space: Despite the smaller installation depth, all the technical highlights of the Uni cistern are also built into the extra-flat TECE Octa cistern range.

Shaded for comparison:
Standard toilet module
with 150mm depth.

Cleverly designed

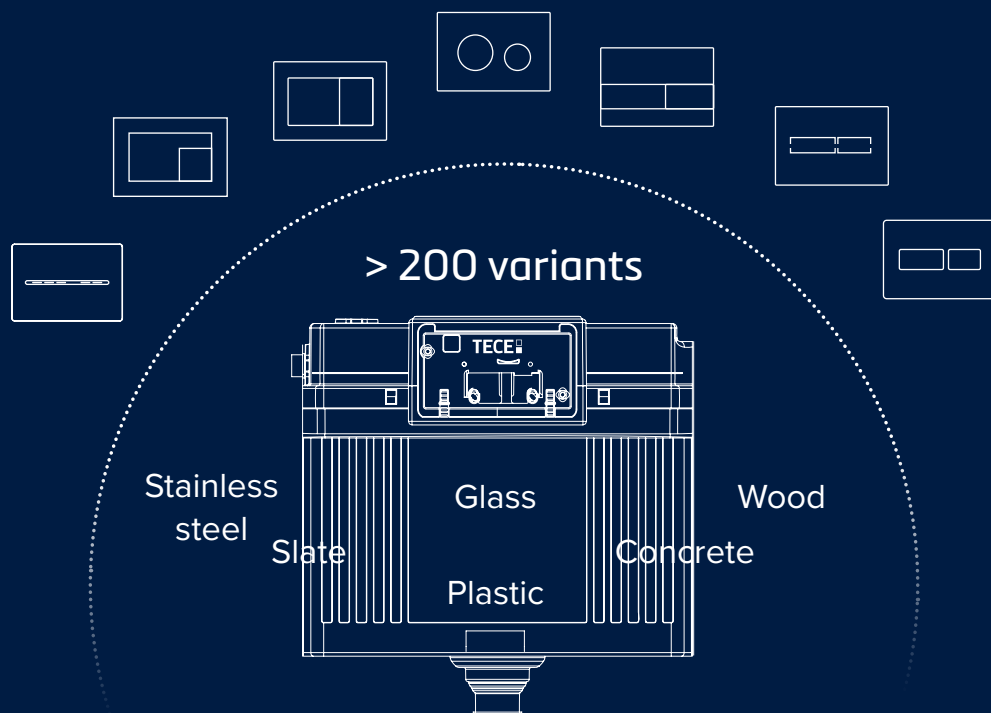

The drain valve with bend function enables optimum handling: If the drain valve has to be removed for an inspection, it can simply be bent in the upper section - and can therefore be removed from the cistern without difficulty.

ALWAYS COMPATIBLE

With TECE toilet flush plates, there are no limits to your design and flexibility.

Because for renovation and modernisation work, they can be interchanged regardless of series and year. Even after decades.

DESIGN PLUS

Perfectly combined in front of and behind the wall

A TECE shower toilet combined with the TECElux toilet module - not just a visual highlight. TECElux combines technology and design so beautifully and intelligently that it has already received several awards.

TECElux toilet terminal

- Night light with adjustable proximity sensor
- Sensor flush actuation with programmable functions
- Odour filter for pleasant room air
- Subsequent seat height adjustment
- Easily accessible system parts concealed behind the wall
