“A system that is reliable and can be used anywhere. That's what I expect from modern drainage.”

RELIABILITY CAN BE THIS BEAUTIFUL

03

With drainage systems from TECE, you can realise the highest design requirements thanks to flexible application options and high-quality materials. Whether integrated almost invisibly or as a high-contrast eye-catcher, they are a statement of timeless design and maximum technical precision. The careful craftsmanship guarantees excellent functionality and durability.

At TECE, maximum design freedom and maximum reliability go hand in hand. With the independent Seal System test, we offer the perfect bond with standard sealing products.

Attractive, hygienic, reliable: drainage systems made by TECE.

TO THE POINT

Whether as a central drainage element or close to the wall – TECEdrainpoint S playfully integrates into any space and impresses as an innovative and versatile system solution.

Simply hygienic

The drain body of TECEdrainpoint S comes with an odour trap that can be easily removed and cleaned at any time. The design grates can then be placed back over the drain body or screwed in – the latter being a preferred version for public areas .

Truly special

For both small or large tiles: in point drainage, the necessary gradient areas integrate harmoniously into the tiling. The floor-level covers come as a design grate made of easy to clean polished stainless steel in two attractive designs or a tile base with or without frames. For perfect integration in the floor covering – especially with natural stone and stoneware.

- 2 Frameless tile base
- 3 Stainless steel design grate
- 4 Stainless steel design grate "quadratum"

TECEdrainpoint S MODULAR SYSTEM

Combine freely in the modular system

So easy. So good.

Modern drainage works reliably – without putting itself at the forefront.

That's why TECEdrainpoint offers a modular system of alternative covers that allow it to fit almost seamlessly into any shower area, as well as a range of drains and accessories that make installation quick, safe and reliable at any desired point in the shower area.

TECEdrainpoint S total package

A TECEdrainpoint S point drainage always consists of:

- A** A design grate or tile base
- B** A drain top
- C** A drain

Technical Information can be found in our product database at:
https://produktdaten.tece.de/web/tece_EN/en/index.xhtml

Factory-fitted sealing collar for the modular system

The factory-fitted Seal System sealing collar has already impressed in every respect in our shower channels. That's why TECE now offers the extra-flat drain set 114 and the plastic grate frame from the TECEdrainpoint range with a factory-fitted sealing collar. This ensures an even easier DIN 18534-compliant connection to the tiler's composite seal.

A Design grate

Covers for TECEdrainpoint S are available as a stainless steel design grate in two designs and sizes (100 x 100 mm / 150 x 150 mm) and also as screwed variants. For covers with tiles, the tile piece is inserted directly into the frameless tile base or the tileable channel.

B Drain top

Drain tops for TECEdrainpoint S are available with a plastic or stainless steel grate frame.

TECEdrainpoint S plastic grate frame is available with design grate and factory-fitted sealing collar.

C Drain

The TECEdrainpoint S range comprises drains for various installation heights and for DN 50/70/100 drain pipes. All drains are equipped with a Seal System universal flange.

Accessories

TECEdrainpoint S point drains can be completed with a separately ordered membrane odour and hair trap. The range also includes the mechanical odour trap, which can be retrofitted at any time and acts as an odour and vermin barrier. Additionally the TECEdrainpoint S range offers accessories such as assembly aids and fire protection.

Drain sets are available in a complete package for the most common applications.

SMALL BUT POWERFUL

Point drains such as TECEdrainpoint S are true all-rounders, from private bathrooms to wet rooms.

TECEdrainpoint S: INSTALLATION

One flange for every situation

The Seal System universal flange enables the connection of two sealing variants with a single flange. Composite seals or compression flange connections can be made, e.g. for connection of bitumen membrane sheets.

10

Examples for the design of a composite seal with Seal System sealing collar and a tested sealing product:

- 1 Second layer composite seal
- 2 Seal System sealing collar
- 3 First layer composite seal
- 4 Protective film universal flange
- 5 Screed

Example of the seal of a TECEdrainpoint S drain with clamping flange connection and connection to sealing layers.

Meeting standards - during production and in the application

As one of the leading German manufacturers of floor-level shower systems, compliance with the relevant standards is a significant feature of our service commitment. Naturally, TECE offers standard-compliant products in all areas of drainage systems. The fulfilment of the standard relates not only to the sealing technology with the application standard DIN 18534, but also to requirements from the product standard DIN EN 1253 and to fire and sound insulation requirements.

The product and testing standard DIN EN 1253 and application standard DIN 18534 are of particular importance to the shower drainage sector. For more information, visit www.tece.com/en/drainage-systems

SEAL SYSTEM – COMPOSITE SEAL, INDEPENDENTLY TESTED

No more time-consuming research. With Seal System, fitters and tilers have guaranteed safety when connecting bonded waterproofing to shower channels and point drains.

“I want to use the sealants I've always used. What's the point if a manufacturer has only tested a product that I cannot get here?”

Seal System – tested for practical application

The market offers a wide range of sealing products that vary regionally or simply according to the preferences of the processor. The problem is that the relevant combination of drainage product and composite seal is often not tested. And that's exactly where Seal System comes in. As part of a comprehensive combination test of TECE drainage systems and numerous composite seal products, a testing institute was commissioned to carry out the leak test.

Planners and processors now have tested security and almost 'free choice' when it comes to composite seals. Practise-oriented: a list of the successfully tested sealing products is supplied with the drainage products. In addition, the tested composite seal products for each product line are summarised in a test certificate and are available on the TECE homepage.

For information on Seal System, tested sealing products and test certificates online visit www.sealsystem.net.

SAFE AND QUIET – WITHOUT EXCEPTION

Tested sound insulation with Drainbase sound insulation mat

Although just 6 mm thick, the Drainbase sound insulation mat makes it possible to fulfil the enhanced sound insulation requirements stipulated by DIN 4109 and VDI 4100 (SSt III). The mat is laid below the screed in the shower area or in the entire bathroom. With Drainbase, the compression is just 0.6 mm at a load of 15 t/m². As a result, the usual screed settlement can be kept to a minimum. The Drainbase sound insulation mat is therefore also ideal for renovations.

Reliable, simple, fast – the Firestop fire protection set

The FireStop fire protection sets are innovative and safe solutions for the vertical drains of TECEdrainprofile, TECEdrainline and TECEdrainpoint S. The fire protection sleeve is simply screwed on from below, eliminating the need for the usual filling of the hole. The set has been tested, approved throughout the EU (ETA) and a general type approval (aBG) has been applied for.

In the event of fire, the intumescent material of the fire protection sleeve expands and closes the drain, safely protecting it from fire and smoke.

TECE DRAINAGE SOLUTIONS

Looks good, says the client. It fits, we say.
Thanks to the wide range of combinations of covers,
drain tops and drains in the TECE modular system.

TECEdrainline

TECEdrainprofile

Individually combined: the TECEdrainline shower channel consists of a channel body in various versions, a glass or stainless steel cover or a carrier and a channel for natural stone or tiles and one of five drains. All of these items can be ordered separately and are freely combinable with each other.

One length-adjustable shower profile and one of three drains: done. The range of TECEdrainprofile shower channels is small, but thanks to individual cutting to length and setting up in the shower area, it is still suitable for every installation situation. The stainless steel channels are available in five different lengths and five current colour variations in a choice of brushed or polished look.

TECEdrainpoint S

The TECEdrainpoint S point drain can be freely assembled using a design grate or tileable channel, a matching drain and a drain top with a grate frame. Practical when things need to happen quickly: the TECEdrainpoint S complete sets for the most common point drain combinations.

Always the right solution

Tastes differ – just like the structural requirements that drainage systems have to meet. That's why TECE offers a wide range of drainage solutions
