

QUICK AND SIMPLE PLANNING!

TECEsmartwall – the configurator
for TECEprofil installation walls

NEW

TECEsmartwall: SIMPLE PLANNING, SIMPLE ASSEMBLY!

Now you can plan TECEprofil installation walls even better with the new TECEsmartwall configurator. The program is simple and intuitive to use. In just a few steps you get invitations to tender, quotations, bills of material and a better calculation.

“The project planning of pre-wall systems with the help of planning software simplifies and shortens the construction process quite significantly. In addition to the intuitive operation, reliable calculation of materials and costs is critical for success.”

Christian Jentzsch, project planner

TECEprofil bathroom planning with TECEsmartwall

The TECEsmartwall software is a useful tool for planning and calculating TECEprofil pre-walls. The easy to operate program unlocks all the advantages of the TECEprofil system for the user.

With TECEprofil, the bathroom remains the fitter's trade, from planning through to the ready-to-tile surface. The planning of individual private bathrooms is just as easy as prefabricating multiple units in the workshop – this is particularly worthwhile for renovations of occupied buildings.

Program features

- Always available as an online tool
- Compatible even for mobile devices
- Products from the current product range
- Quick construction of installation walls
- Optional tender and quote generation
- Creation of dimensioned wall sketches
- GAEB export
- Creation of detail, material and calculation lists

TECEsmartwall – the ideal tool for rational pre-fabrication of installation walls in the local workshop

Prefabrication in the workshop is normally zero-stress and trouble-free. Unlike assembly on the construction site, some questions and tasks are unnecessary: Have you considered the right tools and charged the ones with batteries? Do you have the right components in the right quantities so you don't have to go back to the workshop?

In an economical evaluation, pre-fabrication leads to a reduction of travel expenses and travel time and thus to greater efficiency in everyday work. Even the building client will welcome this mode of assembly because the construction process on the construction site is optimised – no matter whether it's a new building or renovation.

1. Measurement on the construction site

2. Planning with TECEsmartwall

3. Prefabrication in the workshop

4. Delivery of the finished installation wall at the construction site

5. Assembled pre-wall, ready for panelling and tiling.
